NEWS RELEASE

NETSCOUT SYSTEMS Launches Its Middle East Market Presence with Broad Range of Service Assurance and Cyber Assurance Solutions

2015-10-20

Company's recent acquisition of Danaher Corporation's communications business brings together best-in-class network performance and cyber security solutions to form a strong partner to Middle East enterprises

DUBAI, United Arab Emirates – 19 October, 2015 – At GITEX this week, NETSCOUT SYSTEMS, INC. (NASDAQ: NTCT), a market leader in service assurance and cyber security solutions, is introducing—for the first time under the NETSCOUT brand—several products that were part of the company's acquisition of Danaher Corporation's (NYSE: DHR) Communications Business earlier this year for $2.3 billion (USD). At GITEX, NETSCOUT is highlighting industry-leading solutions that enable its customers in the region to realize the maximum value from their investment in networking technologies.

"NETSCOUT views the Middle East as a new and strategic market for us. As a result of the acquisition, we are better positioned in high-growth markets like the Middle East to offer a broad portfolio of best-in-class solutions," commented Jim McNiel, senior vice president of Worldwide Marketing for NETSCOUT. "Given the region's focus on Smart Cities and other technology initiatives that will make the Connected World more of a reality, it's only natural for NETSCOUT to take a prominent role at GITEX and use this very important event to launch our expanded solution set."

Ensuring flawless service delivery across wired and wireless networks is increasingly becoming more complex and fraught with risk for enterprises worldwide. Traditional performance monitoring tools simply can't provide a holistic view of the entire network, and therefore can't equip IT with the insight needed to deliver an optimal end-user experience.

NETSCOUT solutions enable continuous monitoring and real-time analysis, allowing organizations to eliminate finger pointing and reduce the time needed to find the root cause of networks performance issues, thereby helping IT teams ensure the best possible experience

“As part of NETSCOUT, Fluke Networks Enterprise Solutions can offer its global partners and customers an enhanced level of services to help them grow their business. We can now tap into a broader set of products and industry expertise to better tailor our IT solutions to meet stringent customer demands,” added Gary Staley, vice president of Global Sales for Fluke Networks Enterprise Solutions, a business unit of NETSCOUT.

In the Middle East, the post-acquisition NETSCOUT is now better able to offer service providers, enterprises and public sector agencies the intelligence and analytics needed to maximize the benefits of powerful technology advances such as IP convergence, virtualization, cloud computing, mobility, bring your own device (BYOD), and the evolving Internet of Things.

“Fluke Networks has always been a proud partner to our Middle East partners and customers. With NETSCOUT’s increased presence in the region, we can provide regional businesses with the network service assurance solutions that will help them drive growth and sustain profitability,” said Gerhard Auer, vice president of EMEA Sales for Fluke Networks Enterprise Solutions. “Of course, what hasn’t changed is dedication to product quality and our unwavering commitment to our existing partners and customers, even as we move to expand our business.”

GITEX attendees can learn more about Fluke Networks Enterprise Solutions products—as well as those offered by Arbor Networks, VSS Systems and NETSCOUT—in the Network and Security Hall at Booth B1 and 2.
