NEWS RELEASE

NETSCOUT Celebrates 30th Anniversary Worldwide with Real-Time Video Conference and New Photo-Sharing Website

2015-05-27

The NetScout nGeniusONE Platform Assures an Extraordinary Experience for Every Employee

WESTFORD, Mass.--(BUSINESS WIRE)--May 27, 2015-- **NetScout Systems, Inc.** (NASDAQ: NTCT), a market leader in service assurance solutions, commemorated its 30th Anniversary with a real-time global video conference and company-wide messaging and photo-sharing website that allowed all 1,100 employees worldwide to celebrate together in one virtual event.

“When we began the company in 1984, there was no Internet, and there were no cell phones,” said Anil Singhal, co-founder, president and chief executive officer at NetScout. “Today, we live in a connected world, so our goal was to connect every employee, in every corner of the world, on any device, for a virtual 30th anniversary celebration using the tools that we have created.”

The NetScout service assurance solutions help some of the world’s largest and most successful enterprise and service provider companies assure the delivery of business services in complex, multi-location, multi-vendor physical, virtual, and hybrid IP environments. Using our own award-winning NetScout **nGeniusONE®** Service Assurance platform, **InfiniStream®** Appliance, and **Adaptive Service Intelligence™** (ASI) technology, the NetScout IT team enabled a global video conference and new photo-sharing website with the comfort of knowing that our products would assure a seamless experience for every employee, across a very complex infrastructure.

“With distributed offices on three continents, mobile users around the world, and a host of WebEx attendees, this was an imposing task due to the real-time nature of data, video and voice services,” said Ken Boyd, chief information officer at NetScout. “We closely monitored the delivery of our video conference and high-performance

website to validate the quality of our new services. Once the video conference began our information technology experts individually tracked our LAN, WAN, Internet, Unified Communications (UC) and Microsoft SharePoint activity, so that we knew precisely what the user experience was for every connected employee in real-time."

"Seeing our IT team pull off a flawlessly executed real-time global video event and the heart-warming exchanges amongst employees worldwide on the message and photo-sharing portal, was one of those singular precious milestones that we could have never imagined when we embarked on this journey three decades ago," said Singhal.
