

Henry Schein and Henry Schein One Introduce End-to-End Prosthetic Workflow Through Open Architecture Platform LinkIt™

2025-09-26

Custom Nightguards Initiated in Dentrax Now Available

MELVILLE, N.Y., September 26, 2025 — Henry Schein, Inc. (Nasdaq: HSIC) and Henry Schein One announced today that custom nightguards are now available through the [LinkIt™ digital workflow](#). This integration represents a significant step in the dental industry, empowering dental practices using the Dentrax® platform to streamline and automate the entire process of providing nightguards, from initial patient scan to final delivery.

The companies are showcasing this solution at the Henry Schein FastPass lounge at DS World, happening now in Las Vegas.

The launch of nightguards on the LinkIt platform, deeply integrated with Dentrax, demonstrates the workflow's capability to bridge the gap between practice management and digital production. It is designed to create a single, cohesive workflow by eliminating the need for multiple software platforms, repetitive data entry, and the uploading and downloading of files. LinkIt is the seamless connection between Dentrax, third-party imaging, and design and production, including milling and 3D printing. This enables dental professionals to focus on patient care, while technology automates complex logistical steps.

"The introduction of this comprehensive workflow for nightguards through LinkIt is a significant leap forward in our mission to simplify digital dentistry for our customers," said Mackenzie Richter, Vice President, Global Commercial Digital Workflow Solutions, Henry Schein, Inc. "We are providing a single, intuitive workflow that not only enhances the patient experience but also allows practices to save time, reduce errors, and improve their bottom line. This is the first of many solutions we plan to enable with our LinkIt platform."

The new workflow, built on LinkIt's open architecture, transforms the traditional nightguard process, eliminating manual steps and connecting disparate systems. This allows dental professionals to leverage existing technology investments while ensuring a smooth, integrated experience from patient to final product. The process is comprised of three key steps:

Choose An Intraoral Scanner: The open architecture connects to most intraoral scanners, including devices from Planmeca, Dentsply Sirona, or Medit, with more to come, all available through Henry Schein Dental. This flexibility allows practices to use their preferred equipment.

Supercharged Imaging: Dentrax automatically links to the preferred intraoral scanner software. Once the patient's teeth are scanned, the images are automatically captured, viewed, and auto-synced back to the patient's chart within Dentrax.

Order with Ease: The entire ordering process is managed within Dentrax. Dental teams send the patient's virtual model and the order is automatically uploaded to [nightguard.com](#), where it can be tracked from submission to delivery. The scan-and-send solution enables the nightguard to return to the office in a few days with easy tracking in Dentrax.

"For too long, practices have had to make a choice between innovative technology and integration," said Dr. Ryan Hungate, Chief Clinical and Strategy Officer, Henry Schein One. "We're here to change that. LinkIt isn't just an open architecture workflow; it's another step in our commitment to removing friction from the dental practice, from imaging to billing. The nightguard solution provides a truly seamless process built on a foundation of security. This is just the beginning of how we'll continue to build out this platform, providing practices with the tools they need to succeed on their own terms."
