

NEWS RELEASE

ENDO 2021 PRESENTATIONS SHOWCASE THREE CLINICAL PROGRAMS

2021-03-12

SAN DIEGO, March 11, 2021 — **Crinetics Pharmaceuticals**, Inc. (Nasdaq: CRNX), a clinical stage pharmaceutical company focused on the discovery, development, and commercialization of novel therapeutics for rare endocrine diseases and endocrine-related tumors, announced upcoming oral and poster presentations at the Endocrine Society's annual ENDO 2021 congress. In addition to a poster summarizing the company's previously announced **ACROBAT Phase 2 results of paltusotine** for the treatment of acromegaly, Crinetics will provide details of the improved tablet formulation of paltusotine that the company plans to advance into Phase 3 studies. Preclinical evidence supporting the company's development of its selective somatostatin receptor type 5 (SST5) agonist, **CRN04777, for the treatment of congenital hyperinsulinism** was selected for a late-breakers e-poster presentation. An oral presentation will also be given on the preclinical studies of **CRN04894, the company's lead adrenocorticotrophic hormone (ACTH) antagonist** for the treatment of diseases associated with excess ACTH such as congenital adrenal hyperplasia (CAH) and Cushing's disease.

The poster and oral presentations will be made available on the Crinetics website following the conclusion of the congress. For ENDO attendees, Crinetics staff will also be available to address questions and discuss pipeline programs in the virtual exhibit hall.

March 20, 2021, 11:00 a.m. eastern time

Session P15

- Bench to Bedside: Novel Mechanisms in Diabetes and Metabolism
- Selective Somatostatin 5 (SST5) and Somatostatin 2 (SST2) Nonpeptide Agonists Potently Suppress Glucose- and Tolbutamide-Stimulated Dynamic Insulin Secretion from Isolated Human Islets

Session P30

- Clinical Trials and Study Updates in Neuroendocrinology and Pituitary
- Pharmacokinetics and Safety of an Improved Oral Formulation of Paltusotine, a Selective, Nonpeptide Somatostatin Receptor 2 (SST2) Agonist for the Treatment of Acromegaly
- ACROBAT Edge Phase 2 Study: Safety and Efficacy of Switching Injected Peptide Long-Acting Somatostatin Receptor Ligands to Once Daily Oral Paltusotine

March 21, 2021 at 2:00 p.m. eastern time

Session OR03

- Wide Spectrum of Translational Adrenal Research
- Effects of CRN04894, a Nonpeptide Orally Bioavailable ACTH Antagonist, on Corticosterone in Rodent Models of ACTH Excess

About Crinetics Pharmaceuticals

Crinetics Pharmaceuticals is a clinical stage pharmaceutical company focused on the discovery, development, and commercialization of novel therapeutics for rare endocrine diseases and endocrine-related tumors. The company's lead product candidate, paltusotine (formerly CRN00808), is an investigational, oral, selective nonpeptide somatostatin receptor type 2 (SST2) agonist for the treatment of acromegaly, an orphan disease affecting more than 26,000 people in the United States. Crinetics plans to advance paltusotine into a Phase 3 program in acromegaly and a Phase 2 trial for the treatment of carcinoid syndrome associated with neuroendocrine tumors. The company is also developing CRN04777, an investigational, oral, nonpeptide somatostatin receptor type 5 (SST5) agonist for congenital hyperinsulinism, as well as CRN04894, an investigational, oral, nonpeptide ACTH antagonist for the treatment of Cushing's disease, congenital adrenal hyperplasia, and other diseases of excess ACTH. All of the company's drug candidates are new chemical entities resulting from in-house drug discovery efforts and are wholly owned by the company. For more information, please visit crinetics.com.
