NEWS RELEASE

NETSCOUT Introduces Cybersecurity Forensics for AWS Cloud Workloads

2020-12-16

Expands Smart Perimeter Protection Solution to The Public Cloud, Offering Packet-Based Threat Hunting and Incident Response in AWS

WESTFORD, Mass.--(BUSINESS WIRE)-- **NETSCOUT SYSTEMS, INC.,** (NASDAQ: NTCT), a leading provider of service assurance, security, and business analytics, today announced the extension of its Smart Perimeter Protection to AWS. The combination of **NETSCOUT's Cyber Investigator (NCI)** and CyberStream software with new AWS packet access services helps contain costs and achieve better efficiencies in mitigating novel security threats as enterprises move applications to the cloud. As the threat surface expands, the solution uses packet data and powerful cyber analytics to get to the root cause of cybersecurity issues quickly.

NETSCOUT has collaborated with AWS on packet access solutions by introducing multiple innovative ways to access packet traffic for cybersecurity and end-user experience use cases. This includes the recently announced Gateway Load Balancer (GWLB), which provides practical, affordable, and scalable access to packet traffic for security and performance management. Using GWLB, customers can direct traffic from any Virtual Private Cloud (VPC) to CyberStream and Cyber Investigator without leaving the cloud. The new Smart Perimeter Protection solution seamlessly integrates with AWS.

"NETSCOUT is committed to providing the most cost-effective and consistent visibility and control regardless of where an application runs," said Paul Barrett, CTO, Enterprise, NETSCOUT. "NCI and CyberStream extend security forensics capabilities into the cloud, unlike any other solution. Armed with NETSCOUT's smart data, security, and IT operations teams benefit from a shared perspective and a cost-effective solution that scales to the needs of the cloud."

For more information about how NETSCOUT is working with AWS to improve packet-level visibility for better security and performance, please visit our **AWS partner page**.

About NETSCOUT

NETSCOUT SYSTEMS, INC. (NASDAQ: NTCT) helps assure digital business services against disruptions in availability, performance, and security. Our market and technology leadership stems from combining our patented smart data technology with smart analytics. We provide real-time, pervasive visibility and insights customers need to accelerate and secure their digital transformation. Our approach transforms the way organizations plan, deliver, integrate, test, and deploy services and applications. Our nGenius™ service assurance solutions provide real-time, contextual analysis of service, network, and application performance. Arbor Smart DDoS Protection by NETSCOUT products help protect against attacks that threaten availability and advanced threats that infiltrate networks to steal critical business assets. To learn more about improving service, network, and application performance in physical or virtual data centers, or in the cloud, and how NETSCOUT's performance and security solutions powered by service intelligence can help you move forward with confidence, visit **www.netscout.com** or follow @NETSCOUT on Twitter, Facebook, or LinkedIn.
