

## NETSCOUT strengthens its Powerful Business Assurance Lineup for the Enterprise with nGenius for Flows

2016-07-19

Offers the most comprehensive service assurance solution in the industry by extending award-winning Adaptive Service Intelligence analysis to flow-based data sources

WESTFORD, Mass.--(BUSINESS WIRE)--Jul. 19, 2016-- **NETSCOUT SYSTEMS, INC.** (NASDAQ: NTCT), a market leader in **business assurance**, a powerful combination of service assurance and cybersecurity solutions, today announced nGenius® for Flows, an integrated extension to nGeniusONE®. By adding NetFlow and other flow data to its core packet flow data sources all are converted to proprietary Adaptive Service Intelligence® (ASI) data for business assurance analytics.

As enterprises increasingly look to implement transformative digital business initiatives to gain a competitive edge, IT is under growing pressure to ensure these initiatives are deployed in record time and deliver uninterrupted, secure, high-quality performance. Although it lacks the power of packet flow, NetFlow extends the reach of nGenius solutions to parts of the infrastructure not instrumented with **InfiniStream®** data sources.

“The digital transformation pace today requires enterprises to have real-time visibility into the health and dependencies of their key digital initiatives and into the infrastructure supporting them so that they can accelerate time to deployment and reduce risk to service continuity and quality,” explained Michael Szabados, chief operating officer at NETSCOUT. “With the introduction of nGenius for Flows, NETSCOUT offers the most extensive and most scalable service monitoring capability and enables the largest global enterprises and government agencies to deploy major new initiatives with confidence.

With nGenius for Flows, IT organizations can:

- Proactively manage network traffic and bandwidth to avoid congestion problems, leveraging NetFlow alongside ASI data sources.
- Scale advanced service assurance capabilities across any network size through the collection of readily available flow data from flow-enabled router or switch interfaces.
- Make the most of their existing monitoring investments, thus optimizing total cost of ownership.

NETSCOUT'S one-of-a-kind approach to service assurance and cybersecurity is unmatched in the industry. Relying on patented ASI technology and nGenius for Flows, NETSCOUT solutions are easily used by beginners, yet powerful enough for experts.

## Availability

nGenius for Flows is now available as part of the **nGeniusONE** platform 5.5 release.

## About NETSCOUT SYSTEMS, INC.

NETSCOUT SYSTEMS, INC. (NASDAQ: NTCT) is a market leader in real-time service assurance and cybersecurity solutions for today's most demanding service provider, enterprise and government networks. NETSCOUT's Adaptive Service Intelligence (ASI) technology continuously monitors the service delivery environment to identify performance issues and provides insight into network-based security threats, helping teams to quickly resolve issues that can cause business disruptions or impact user experience. NETSCOUT delivers virtually unmatched service visibility and protects the digital infrastructure that supports our connected world.
