Anduril and Voyager Establish Strategic Partnership Across Advanced Weapons and Propulsion

2026-09-29

Partnership includes multiple programs, with a defined path to high-rate domestic production

DENVER--(BUSINESS WIRE)-- Anduril Industries and Voyager Technologies (NYSE: VOYG) announced a strategic partnership to accelerate the development, testing, qualification and production of critical technologies for advanced U.S. weapon systems and missile defense.

Anduril and Voyager are already collaborating across multiple strategic weapons programs, including some of the Department of War's highest priority initiatives. To date, Voyager is contracted to supply more than \$60 million of critical technologies to Anduril in support of those programs, including solid rocket motors, divert and attitude control systems, and other advanced capabilities. This partnership formalizes the relationship between the two companies, establishing a robust shared pipeline of additional programs for both companies to pursue together.

This partnership places a shared focus on manufacturing as programs progress toward long-term, high-rate production. Anduril and Voyager are leveraging a combined billions worth of investments in testing and production infrastructure to deliver systems at scale.

"Anduril has long believed that bringing together the best capabilities across the industrial base is what's going to deliver a decisive advantage for our warfighters," said Palmer Luckey, Founder of Anduril. "This strategic partnership with Voyager lets us build on work we've already proven together and exemplifies our shared commitment to developing, rapidly iterating, and delivering the technology for our nation's most complex security challenges."

Scaled operations in Southern California place Anduril and Voyager's engineering and development teams in close proximity, enabling faster design, integration, prototyping and iteration across advanced weapon systems. Construction is underway on Anduril's 1.18 million square ft campus in Long Beach, California, adding to its research, development, and manufacturing capacity in the state. The new facilities are on track to open in 2027, building on operational production lines already delivering capabilities at its Arsenal-1 in Columbus, Ohio. Voyager's American Defense Complex in Pueblo, Colorado is being developed to extend that model through advanced design, testing, qualification and high-rate production, shortening the transition from development into production and, when fully scaled, supporting production rates of approximately 15,000 to 20,000 propulsion systems per month across its portfolio.

"We've invested more than \$500 million in propulsion, energetics and manufacturing capacity to be ready for exactly this moment," said Matt Magaña, president, Space, Defense & National Security, Voyager. "This partnership converts that investment into production programs today and positions us for the demand we expect as next-generation missile defense expands nationally."

About Anduril Industries

Anduril Industries is a leading defense technology company with a mission to transform U.S. and allied military capabilities with advanced technology at scale. By bringing the expertise, technology, manufacturing methods, and business model of the 21st century's most innovative companies to the defense industry, Anduril is changing how military systems are designed, built, and sold. Cautionary Statement Concerning Forward-Looking Statements:

This press release contains "forward-looking statements." All statements, other than statements of historical fact, including those with respect to Voyager Technologies, Inc.'s (the "Company's") mission statement and growth strategy, are "forward-looking statements." Although the Company's management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve many risks and uncertainties, which could cause the Company's future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, the Company's

ability to sustain and generate growth, ability to generate a sustainable order rate for its products and services and develop new technologies to meet customer needs, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; and the ability to obtain necessary financing on acceptable terms or at all. Readers should not place any undue reliance on forward-looking statements since they involve these known and unknown uncertainties and other factors which are, in some cases, beyond the Company's control and which could, and likely will, materially affect actual results, levels of activity, performance or achievements. Any forward-looking statement reflects the Company's current views with respect to future events and is subject to these and other risks, uncertainties and assumptions relating to operations, results of operations, growth strategy and liquidity. The Company assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.
