Voyager Awarded Raytheon Contract Supporting SM-3

2026-08-06

Company's throttleable propulsion tech advancing SM-3 and next-generation interceptor

DENVER--(BUSINESS WIRE)-- Voyager Technologies (NYSE: VOYG) has been awarded a contract by Raytheon, an RTX business, to advance propulsion technologies for the Standard Missile-3 (SM-3®) interceptor family. The company will provide its solid controllable throttleable propulsion technology and divert, attitude and control systems (DACS) — the precision subsystems that enable accuracy in the exo-atmospheric midcourse phase of flight.

"Our propulsion technology adds to the nation's missile defense architecture, enabling higher precision, greater reliability and safer operation than legacy systems," said Matt Magaña, president, Space, Defense & National Security. "This contract reflects both the demand signal for missile defense and our responsibility to deliver a high-performance, low-cost system to meet the required scale."

Voyager's DACS provides precision maneuvering and stabilization for missiles, interceptors and space payloads. Its next-generation solid propulsion technology — including advanced architectures, thrusters and hot-gas valves — steer and orient high-agility vehicles with high response and reliability under extreme operational conditions.

Voyager has been advancing this DACS technology for more than a decade, serving as the baseline for multiple next-generation weapon systems. The DACS application of this technology provides the multi-axis maneuvering capability — divert thrust and roll, pitch and yaw control — required to guide the SM-3's kinetic warhead to intercept. These capabilities also support Raytheon's advanced interceptor program development, as next-generation systems require faster, more agile terminal maneuvering to counter sophisticated ballistic threats.

About Voyager Technologies

Voyager Technologies is a defense technology and space solutions company that enables mission-ready systems that secure today and power what's next for the U.S. and partner nations. From propulsion and energetics to advanced electronics, mission management and space exploration, Voyager delivers capabilities that protect national security, reinforce the industrial base and expand human presence beyond Earth. Cautionary Statement Concerning Forward-Looking Statements:

This press release contains "forward-looking statements." All statements, other than statements of historical fact, including those with respect to Voyager Technologies, Inc.'s (the "Company's") mission statement and growth strategy, are "forward-looking statements." Although the Company's management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve many risks and uncertainties, which could cause the Company's future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, the Company's ability to sustain and generate growth, ability to generate a sustainable order rate for its products and services and develop new technologies to meet customer needs, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; and the ability to obtain necessary financing on acceptable terms or at all. Readers should not place any undue reliance on forward-looking statements since they involve these known and unknown uncertainties and other factors which are, in some cases, beyond the Company's control and which could, and likely will, materially affect actual results, levels of activity, performance or achievements. Any forward-looking statement reflects the Company's current views with respect to future events and is subject to these and other risks, uncertainties and assumptions relating to operations, results of operations, growth strategy and liquidity. The Company assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.
