NEWS RELEASE

Voyager Successfully Tests Plume Surface Interaction Simulator

2026-11-16

Reduced-gravity system designed to inform future lunar landings

DENVER--(BUSINESS WIRE)-- Voyager Technologies (NYSE: VOYG) announced the successful Phase II testing of their Floatinator system, a reduced-gravity simulator for terrestrial testing of Plume Surface Interaction (PSI) events.

“The plume from lunar landings can be hazardous to spacecraft and equipment, and mitigating these hazards is mission-critical as lunar activity increases,” said John Thornton, executive vice president, Lunar and Space Solutions, Voyager. “With Floatinator, we’re gaining a better understanding of PSI effects that will inform design and concepts for future missions.”

PSI testing is difficult to conduct on Earth due to Earth’s gravity and atmosphere. Floatinator is designed to address gaps in current data sets, generating a better understanding of PSI to inform engine design and landing operations, increasing the likelihood of successful lunar landings. Initial Phase I testing proved out the system’s core capabilities, and Phase II took it further with a full-size Floatinator for faster acceleration and increased travel distances to better simulate a lunar landing. This phase of the test uses cold gas thrusters, gives more precise control of the acceleration rate and collects data at multiple gravity levels.

During the test, a 350-pound payload sled was dropped from a 35-foot structure using a controlled acceleration profile to simulate lunar gravity. During the drop, a cold gas thruster fired into a regolith bin to simulate the effects of a lunar landing. The team collected data with high-speed cameras, accelerometers and flow meters. Test results will be reported to NASA for inclusion in their modeling ahead of a similar planned NASA study — Stereo Cameras for Lunar Plume-Surface Studies (SCALPSS) — to be conducted during Voyager’s future lunar landing missions.

Voyager is building the infrastructure that will make America's permanent presence on the Moon a reality. With the most fully integrated commercial lunar platform, the company has the capability at every layer required to land on the lunar surface, sustain life and execute critical missions.

About Voyager Technologies

Voyager Technologies is a defense technology and space solutions company that enables mission-ready systems that secure today and power what's next for the U.S. and partner nations. From propulsion and energetics to advanced electronics, mission management and space exploration, Voyager delivers capabilities that protect national security, reinforce the industrial base and expand human presence beyond Earth. Cautionary Statement Concerning Forward-Looking Statements:

This press release contains "forward-looking statements." All statements, other than statements of historical fact, including those with respect to Voyager Technologies, Inc.'s (the "Company's") mission statement and growth strategy, are "forward-looking statements." Although the Company's management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve many risks and uncertainties, which could cause the Company's future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, the Company's ability to sustain and generate growth, ability to generate a sustainable order rate for its products and services and develop new technologies to meet customer needs, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; and the ability to obtain necessary financing on acceptable terms or at all. Readers should not place any undue reliance on forward-looking statements since they involve these known and unknown uncertainties and other factors which are, in some cases, beyond the Company's control and which could, and likely will, materially affect actual results, levels of activity, performance or achievements. Any forward-looking statement reflects the Company's current views with respect to future events and is subject to these and other risks, uncertainties and assumptions relating to operations, results of operations, growth strategy and liquidity. The Company assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.
