Voyager Unlocks Satellite Propulsion Production at Scale

2026-04-13

Strategic expansion doubled production to meet industry demand

DENVER--(BUSINESS WIRE)-- Voyager Technologies (NYSE: VOYG) announced it has doubled the production capacity at its Denver-metro facility from just one year ago. This milestone demonstrates the company's ability to meet the growing demand for commercial and national security satellite constellations.

"As programs like Golden Dome accelerate the buildout of resilient, multi-layer space architectures, the propulsion systems that make those satellites maneuverable and survivable have to keep pace," said Matt Magaña, president of Space, Defense and National Security, Voyager. "That's exactly what we're delivering, and we are now scaling production even further to quadruple capacity from a year ago."

Each satellite propulsion module integrates a propellant tank, electronics controller, thruster and propulsion distribution system into a compact, high-performance solution. Engineered for the demands of modern space exploration and defense, the technology enables precise orbital maneuvering, threat avoidance and sustained mission effectiveness, supplying the high-efficiency Delta-V performance that the national security posture demands.

Following Voyager's acquisition of ExoTerra Resource, a leading developer of cutting-edge electric propulsion systems, in October 2025, the Littleton facility expanded from 8,000 to 40,000 square feet, increased its workforce and expanded test equipment and training. These upgrades have generated streamlined manufacturing processes and vertical integration of mission-critical propulsion technologies.

Voyager has propulsion module contracts across commercial and governmental customers and organizations to deliver scalable propulsion solutions that support the next generation of space and national defense.

About Voyager Technologies

Voyager Technologies is a defense and space technology company committed to advancing and delivering transformative, mission-critical solutions. By tackling the most complex challenges, Voyager aims to unlock new frontiers for human progress, fortify national security, and protect critical assets from ground to space. Cautionary Statement Concerning Forward-Looking Statements:

This press release contains “forward-looking statements.” All statements, other than statements of historical fact, including those with respect to Voyager Technologies, Inc.’s (the “Company’s”) mission statement and growth strategy, are “forward-looking statements.” Although the Company’s management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve many risks and uncertainties, which could cause the Company’s future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, the Company’s ability to sustain and generate growth, ability to generate a sustainable order rate for its products and services and develop new technologies to meet customer needs, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; and the ability to obtain necessary financing on acceptable terms or at all. Readers should not place any undue reliance on forward-looking statements since they involve these known and unknown uncertainties and other factors which are, in some cases, beyond the Company’s control and which could, and likely will, materially affect actual results, levels of activity, performance or achievements. Any forward-looking statement reflects the Company’s current views with respect to future events and is subject to these and other risks, uncertainties and assumptions relating to operations, results of operations, growth strategy and liquidity. The Company assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.
