# Voyager and Palantir Developing AI-Powered Solution for Space Domain Awareness Applications

2025-04-03

System to perform space-based object detection, identification, classification and tracking

DENVER, March 10, 2025 /PRNewswire/ — Voyager Technologies (Voyager), a global leader in defense technology and space solutions, is expanding its partnership with Palantir Technologies (NASDAQ: **PLTR**) to develop AI-powered solutions for enhanced Space Domain Awareness, enabling the proactive mitigation of potential collisions and threats.

“Our partnership is driving resilience into national security space by providing decision-makers with critical information on operationally relevant timescales,” said Matt Magaña, President of Defense and National Security at Voyager. “We’re developing an integrated solution, harnessing the power of AI with Palantir’s software stack and taking advantage of real-time radio frequency streams and imagery to perform space-based object detection, identification, classification and tracking.”

The open-architecture SDA system pulls data from existing on-orbit assets using Voyager’s VPX signal processing electronics and chassis, signals intelligence software and mission services capabilities and Palantir’s AI/Machine-Learning engines. The team aims to rapidly transition the SDA system from TRL4 to TRL8 as a hosted payload in 2026.

“We are deepening our partnership with Voyager to deliver the transformative capabilities required to maintain our national security,” said Robert Imig, Head of USG Research and Development at Palantir. “We are further extending the reach of our AI solutions from ground to space, a critical frontier where demands are intensifying as the

environment grows increasingly contested.”

Palantir’s AI capabilities will enhance Voyager’s defense and national security solutions, enabling in situ signals processing for optical communication systems and more.

Cautionary Statement Concerning Forward-Looking Statements

This press release contains “forward-looking statements.” All statements, other than statements of historical fact, including those with respect to Voyager Technologies Inc.’s (the “Company’s”) mission statement and growth strategy, are “forward-looking statements.” Although the Company’s management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve many risks and uncertainties, which could cause the Company’s future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; and the ability to obtain necessary financing on acceptable terms or at all. Readers should not place any undue reliance on forward-looking statements since they involve these known and unknown uncertainties and other factors which are, in some cases, beyond the Company’s control and which could, and likely will, materially affect actual results, levels of activity, performance or achievements. Any forward-looking statement reflects the Company’s current views with respect to future events and is subject to these and other risks, uncertainties and assumptions relating to operations, results of operations, growth strategy and liquidity. The Company assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons that actual results could differ materially from those.
