NEWS RELEASE

Voyager and Penn State to Advance Pennsylvania’s Space Economy

2026-07-15

The Pennsylvania State University joins the fast-growing VISTA ecosystem

DENVER--(BUSINESS WIRE)-- Voyager Technologies (NYSE: VOYG) signed a memorandum of understanding (MOU) with The Pennsylvania State University, expanding the Voyager Institute for Space, Technology and Advancement (VISTA) ecosystem. The collaboration will develop joint research programs and applications across in-space research and manufacturing and national security, fusing commercial innovation with defense mission expertise.

“This announcement is the latest in a series of strategic initiatives that tell a larger story, establishing Pennsylvania as an emerging cluster spanning aerospace manufacturing, clinical research and national security innovation for our company,” said John Baum, chief strategy and marketing officer, Voyager. “We have lunar manufacturing in Pittsburgh, life sciences research anchored by one of the country’s largest health systems, and now, a world-class research university.”

Under the MOU, Voyager and Penn State will pursue shared programs and seek external funding to support further technological development. The agreement provides reserved research resources, tenant opportunities and collaboration within the VISTA ecosystem, positioning the university alongside Fortune 500 companies, startups and government agencies, while building the space economy workforce and strengthening VISTA’s capabilities. It also reflects a shared interest in advancing defense and national security technologies across contested domains, including solid controllable propulsion, satellite communications, guidance, navigation and control, and signals intelligence.

Penn State joins a VISTA network that has expanded rapidly over the past year, with momentum building across domestic and international markets. Anchored at The Ohio State University, VISTA includes NASA Glenn Research Center, the University of Connecticut and the University of North Dakota, alongside international partners Óbuda University in Budapest, Hungary, and Yonsei University in Seoul, South Korea, plus a growing roster of commercial tenants. As that interest accelerates, Voyager continues to welcome new tenants to the science park.

VISTA is the first-of-its-kind U.S. science park dedicated to in-space research, manufacturing and services, located on the campus of The Ohio State University. With access to the International Space Station and future commercial space platforms, VISTA tenants develop next-generation technologies and services across civil, commercial and national security markets. Cautionary Statement Concerning Forward-Looking Statements:

This press release contains "forward-looking statements." All statements, other than statements of historical fact, including those with respect to Voyager Technologies, Inc.'s (the "Company's") mission statement and growth strategy, are "forward-looking statements." Although the Company's management believes that such forward-looking statements are reasonable, it cannot guarantee that such expectations are, or will be, correct. These forward-looking statements involve many risks and uncertainties, which could cause the Company's future results to differ materially from those anticipated. Potential risks and uncertainties include, among others, the Company's ability to sustain and generate growth, ability to generate a sustainable order rate for its products and services and develop new technologies to meet customer needs, general economic conditions and conditions affecting the industries in which the Company operates; the uncertainty of regulatory requirements and approvals; and the ability to obtain necessary financing on acceptable terms or at all. Readers should not place any undue reliance on forward-looking statements since they involve these known and unknown uncertainties and other factors which are, in some cases, beyond the Company's control and which could, and likely will, materially affect actual results, levels of activity, performance or achievements. Any forward-looking statement reflects the Company's current views with respect to future events and is subject to these and other risks, uncertainties and assumptions relating to operations, results of operations, growth strategy and liquidity. The Company assumes no obligation to publicly update or revise these forward-looking statements for any reason, or to update the reasons actual results could differ materially from those anticipated in these forward-looking statements, even if new information becomes available in the future.
